

To help the environment, we could have suggested changing their light bulbs. Instead, we asked them to change their curriculum.

Where is the next generation of utility workers coming from? From right here in New Jersey. As our industry faces tremendous environmental challenges, we at PSEG are already building our “green-collar” workforce for the future. Five years ago, we pioneered the Energy Utility Technology Degree program. Today, students can pursue that degree at four community colleges. We’ve already hired more than 80% of the graduates and the curriculum is evolving. A course in Alternative Energy Sources is now being offered. We’re also helping to create a Green Energy Academy for high school students and nuclear energy programs on the college level. At PSEG, we’ve always known that our employees are the most important factor in our success. Which is why we invest in theirs. To learn more, visit pseg.com.

PSEG
We make things work for you.
